THE BETTER CHOICE. SINCE 1948.
German quality sprayers and cut-off machines

Product Information Pressure Sprayers 201C/202C/202CL

NEW

Suitable for the treatment of low and smaller plants and for the commercial use on smaller areas, such as green houses. These handy units can also replace larger sprayers for smaller areas.

Pressure Sprayers "made in Germany" with high quality components and inventive equipment details. Reliable and easy to operate.

Designed for the spraying of liquid plant protection chemicals and liquid fertilizers by the private user. Ideal for the treatment of smaller plants in the garden, on the patio or balcony and for commercial use.

Practical advantages

- Large and ergonomically shaped control systems that can also be operated with gloved hands. Particularly comfortable grip on handle
- Transparent, very robust 1.25 litre or 2 litre container with embossed fill level markings and stable base
- High value, enclosed pump with high degree of efficiency for excellent pressure build up
- Maximum pressure of 3 bar
- After reaching maximum pressure a large part of the remaining tank contents can be sprayed without the need to re-pressurize
- The universal hollow cone nozzle is adjustable from fine spray to jet
- Excellent emptying of residual liquids
- The joint for the nozzle permits effective treatment of the leaf underside and difficult to reach plant sections
- 202CL with 19cm spray wand provides reach for more distant sections of larger plants
- Automatic safety valve releases pressure when the maximum pressure is exceeded. The valve can also be used to manually release pressure
- The handle is equipped with a continuous spray function
- Low weight: 0.46 kg (201 C) or 0,51 kg (202 C) or 0,53 kg (202 CL)
- Spray head with panel to fit label with description of container contents
- Made in Germany

The new and light models of the 2-model series is defined by their highly efficient and enclosed pump that produces the full operating pressure of 3 bar already after a few pump strokes. They are a standout with their convenient and ergonomically shaped handle that is pleasing to the hand and reduces operating fatigue.

The robust pumps achieve the required operating pressure after a few pump strokes. Almost the full contents of the tank can be emptied without having to pump again. The built-in automatic pressure release valve protects against excessive pressure.

The high value hollow cone nozzle is adjustable and can produce all pattern from a sharp jet to very fine mist.

The C-models are fitted with an adjustable nozzle joint. This is very useful to reach the underside of leaves or hard to reach spots.

Model	201C	202C	202CL
Part No.	20102	20202	20203
Piston pump	●		
Nominal tank volume	1,25	2,0	2,0
Spray pressure bar max.	3,0		
Safety pressure valve	●		
Weight, empty kg	0,46	0,51	0,53
Nozzle	Universal hollow cone nozzle, adjustable		
Nozzle head	pivoting 180°		
Spray wand extension	-	-	19 cm
